DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 13-14 and 16-19 have been considered but are moot in view of the new ground(s) of rejection.

New Grounds of Rejection

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13-14 and 16-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsuoka (U.S. Patent 5,640,033) in view of Satoh et al. (U.S. Patent 5,375,069).

Matsuoka discloses in (col. 5, lines 34-49 and FIGS. 1-4) a method of manufacturing a semiconductor device for forming a first wiring pattern (FIG. 4, 51) and a second wiring pattern (FIG. 4, 57) at the same time on a same level wherein the first wiring pattern being connected to a gate electrode (FIG. 4, 53) on a gate insulating film formed on a semiconductor region, and the second wiring pattern being connected to the semiconductor region (FIG. 4, 54a), and wherein in patterning the first and second wiring patterns, a dummy wiring pattern (FIG. 4, 59) electrically separated from and placed between the first and second wiring patterns on the same level is left unetched, the dummy wiring pattern not positively serving as any element in a circuit of the semiconductor device.

Matsuoka fails to explicitly disclose wherein the spaces between the dummy pattern and the first, and second wiring patterns are set generally equal to a minimum pattern space of first, and second wiring patterns.

Satoh discloses the spaces (FIG. 2B, 23, 24, 25) between the dummy pattern (FIG. 2B, 16) and the first (FIG. 2B, 14), and second (FIG. 2B, 15) wiring patterns are set generally equal to a minimum pattern space of the first, and second wiring layers (col. 6, lines 49-61 and FIG. 2B). It would have been obvious to one of ordinary skill in the art of making semiconductor devices to combine the teaching of Matsuoka and Satoh to enable the spaces between the dummy pattern and the first, and second wiring patterns of Matsuoka to be formed and furthermore the improvements in the wiring route search processing speed can be accomplished (col. 2, lines 62-63).

Response to Amendment

Response to Arguments

Applicant's arguments with respect to claims 13-14 and 16-19 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2823

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
